

Recycle
with us!

Angel Aligner Recycling Programme

To address the growing environmental challenges faced by the orthodontics sector, Angel Aligner is launching a recycling programme for dental aligners in the United Kingdom, in partnership with **TerraCycle®**.

This partnership represents a preliminary step in Angel Aligner's ambition to inspire the widespread adoption of more sustainable practices within the orthodontics industry, by enabling practices and your patients to access a reliable and responsible end-of-life solution for aligners.

This is a deeply collaborative project that will depend on commitment from all stakeholders.

Together, we can drive change in the orthodontics industry.
Join us!

Why join us?

Collective and sustainable community

By participating in this programme, your practice can support Angel Aligner in making a concrete contribution to transforming the orthodontics industry.

Reduction of environmental footprint

Prevent your patients' dental aligners from ending up in incinerators or landfills! Recycling aligners with TerraCycle offers several environmental advantages compared to traditional waste disposal methods (incineration; landfill), including reduced carbon footprint.

Turnkey solution

All costs associated with this programme (transport, sorting, aligner recycling) are included in a single price.

Traceable and transparent process

Angel Aligner will give you access to key information about the programme's performance.

Business opportunity

Attract and retain customers and employees who are sensitive to environmental issues by demonstrating your practice's commitment to sustainable development.

How to participate

1 Order

Order your Zero Waste Box™ directly on the Angel Aligner box order page. This unique box has been specially designed for the collection, transport, and recycling of dental aligners. Boxes are billed each time you place an order.

2 Wait for delivery

The boxes are delivered within ten (10) business days from the day of invoicing by the TerraCycle carrier.

3 Collect

Once you have received your box, place it in a convenient place in your practice and start collecting aligners in it. We estimate that one box can hold about 2,500 dental aligners.

4 Ship and recycle

When your box is full, send it back to TerraCycle at no additional cost using the prepaid shipping label affixed to the back of the box. The dental aligners collected by TerraCycle through this programme are sorted and then processed into secondary raw materials to make new products.

5 Order a new box

Once you have returned your full Zero Waste Box™, go to the Angel Aligner request page to order a new box and keep recycling!

Order your Zero Waste Box™

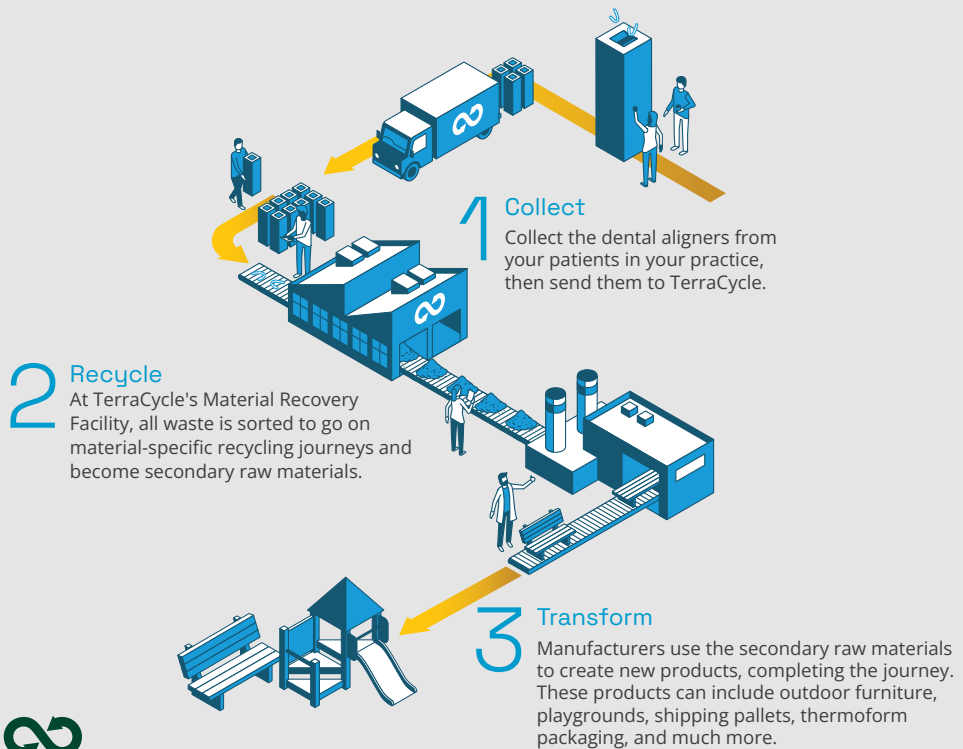

About TerraCycle

TerraCycle is an international leader in innovative sustainability solutions, creating and operating unique platforms in recycling, recycled materials, and reuse. Present in 18 countries, TerraCycle's mission is Eliminating the Idea of Waste®, with a guarantee that all accepted waste sent to them is recycled.
